**DISTRIBUTION OF BIVALVES AND GASTROPODS
IN PHANG-NGA BAY, SOUTH THAILAND**

By Deborah Carr

ABSTRACT

A collection of shelled gastropod and bivalve molluscs was made from Phang-Nga Bay, east of Phuket Island, South Thailand in January 1989. 17 gastropods and 34 bivalves have been identified down to species level and 18 gastropods and 19 bivalves down to genus level (4 gastropods have been identified down to family level only). Tables listing bivalve and gastropod distributions according to the sample site water depth and sediment type are included.
